(54) Title: METHODS FOR MONITORING MULTIPLE GENE EXPRESSION

(57) Abstract

The present invention relates to methods for monitoring differential expression of a plurality of genes in a first filamentous fungal cell relative to expression of the same genes in one or more second filamentous fungal cells using microarrays containing filamentous fungal expressed sequenced tags. The present invention also relates to filamentous fungal expressed sequenced tags and to computer readable media and substrates containing such expressed sequenced tags for monitoring expression of a plurality of genes in filamentous fungal cells.

Example 15: DNA Microarrays

Details of the construction of a typical microarrayer can be found on the world wide web site of Professor Patrick Brown of Stanford University at the following URL: http://cmgm.stanford.edu/pbrown/mguide/index.html. Scanners and computer software for analysis of DNA microarrays are available from several commercial sources such as General Scanning Inc. (Watertown, MA; see http://www.genscan.com/sales/loc lifesci.html), or Axon Instruments (Foster City, CA; see http://www.axon.com).

Individual fungal EST clones were purified as plasmid minipreps using Qiagen Biorobot 9600 (QIAGEN, Inc., Valencia, CA). The plasmid minipreps were precipitated with isopropanol, aliquoted and stored as described on the web site of Professor Patrick Brown of Stanford University at the following URL: http://cmgm.stanford.edu/pbrown/mguide/index.html.

The amplified EST targets prepared in this manner were spotted individually onto polylysine-coated glass slides using a microarrayer device as described by DeRisi et al. (1997,Science 278: 680-686). For additional details. http://cmgm.stanford.edu/pbrown/protocols/index.html). The microarrays were probed with fluorescently labeled cDNA prepared by reverse transcription of polyadenylated mRNA (DeRisi et al., 1997, supra) extracted from fungal mycelia (Example 2). Conditions for pretreatment of the microarrays, hybridization and washing conditions described previously (DeRisi et al., 1997, *supra*; also been

Claims

What is claimed is:

- 5 1. A method for monitoring differential expression of a plurality of genes in a first filamentous fungal cell relative to expression of the same genes in one or more second filamentous fungal cells, comprising:
 - (a) adding a mixture of fluorescence-labeled nucleic acids isolated from the filamentous fungal cells to a substrate containing an array of filamentous fungal ESTs under conditions where the nucleic acids hybridize to complementary sequences of the ESTs in the array, wherein the nucleic acids from the first filamentous fungal cell and the one or more second filamentous fungal cells are labeled with a first fluorescent reporter and one or more different second fluorescent reporters, respectively; and
- (b) examining the array by fluorescence under fluorescence excitation conditions wherein the relative expression of the genes in the filamentous fungal cells is determined by the observed fluorescence emission color of each spot in the array in which (i) the ESTs in the array that hybridize to the nucleic acids obtained from either the first or the one or more second filamentous fungal cells produce a distinct first fluorescence emission color or one or more second fluorescence emission colors, respectively, and (ii) the ESTs in the array that hybridize to the nucleic acids obtained from both the first and one or more second filamentous fungal cells produce a distinct combined fluorescence emission color.
- The method of claim 1, wherein the filamentous fungal ESTs are selected from
 the group consisting of Acremonium, Aspergillus, Fusarium, Humicola, Mucor,
 Myceliophthora, Neurospora, Penicillium, Thielavia, Tolypocladium, and Trichoderma
 ESTs.
 - 3. The method of claim 2, wherein the filamentous fungal ESTs are Fusarium ESTs.
 - 4. The method of claim 3, wherein the filamentous fungal ESTs are *Fusarium* venenatum ESTs.

5. The method of claim 4, wherein the *Fusarium venenatum* ESTs are selected from the group consisting of SEQ ID NOs. 1-3770, nucleic acid fragments of SEQ ID NOs. 1-3770, and nucleic acid sequences having at least 90% homology to SEQ ID NOs. 1-3770.

- 5
- 6. The method of claim 5, wherein the *Fusarium venenatum* ESTs are SEQ ID NOs. 1-3770.
- 7. The method of claim 5, wherein the *Fusarium venenatum* ESTs are nucleic acid sequences having at least 90% homology to SEQ ID NOs. 1-3770.
 - 8. The method of claim 7, wherein the *Fusarium venenatum* ESTs are nucleic acid sequences having at least 95% homology to SEQ ID NOs. 1-3770.
- 15 9. The method of claim 8, wherein the *Fusarium venenatum* ESTs are nucleic acid sequences having at least 99% homology to SEQ ID NOs. 1-3770.
 - 10. The method of claim 9, wherein the *Fusarium venenatum* ESTs are nucleic acid sequences having at least 99.9% homology to SEQ ID NOs. 1-3770.

20

- 11. The method of claim 2, wherein the filamentous fungal ESTs are Aspergillus ESTs.
- 12. The method of claim 11, wherein the Aspergillus ESTs are Aspergillus niger 25 ESTs.
 - 13. The method of claim 12, wherein the *Aspergillus niger* ESTs are selected from the group consisting of SEQ ID NOs. 3771-4376, nucleic acid fragments of SEQ ID NOs. 3771-4376, and nucleic acid sequences having at least 90%, preferably at least 95%, more preferably at least 99%, and most preferably at least 99.9% homology to SEQ ID NOs. 3771-4376.

14. The method of claim 13, wherein the Aspergillus niger ESTs are SEQ ID NOs. 3771-4376.

- 15. The method of claim 13, wherein the Aspergillus niger ESTs are nucleic acid sequences having at least 90% homology to SEQ ID NOs. 3771-4376.
 - 16. The method of claim 15, wherein the Aspergillus niger ESTs are nucleic acid sequences having at least 95% homology to SEQ ID NOs. 3771-4376.
- 10 17. The method of claim 16, wherein the Aspergillus niger ESTs are nucleic acid sequences having at least 99% homology to SEQ ID NOs. 3771-4376.
 - 18. The method of claim 17, wherein the Aspergillus niger ESTs are nucleic acid sequences having at least 99.9% homology to SEQ ID NOs. 3771-4376.
 - 19. The method of claim 11, wherein the Aspergillus ESTs are Aspergillus oryzae ESTs.

- 20. The method of claim 19, wherein the Aspergillus oryzae ESTs are selected from the group consisting of SEQ ID NOs. 4377-7401, nucleic acid fragments of SEQ ID NOs. 4377-7401, and nucleic acid sequences having at least 90% homology to SEQ ID NOs. 4377-7401.
- 21. The method of claim 20, wherein the Aspergillus oryzae ESTs are SEQ ID NOs.25 4377-7401.
 - 22. The method of claim 20, wherein the *Aspergillus oryzae* ESTs are nucleic acid sequences having at least 90% homology to SEQ ID NOs. 4377-7401.
- 30 23. The method of claim 22, wherein the *Aspergillus oryzae* ESTs are nucleic acid sequences having at least 95% homology to SEQ ID NOs. 4377-7401.

24. The method of claim 23, wherein the *Aspergillus oryzae* ESTs are nucleic acid sequences having at least 99% homology to SEQ ID NOs. 4377-7401.

- 25. The method of claim 24, wherein the *Aspergillus oryzae* ESTs are nucleic acid sequences having at least 99.9% homology to SEQ ID NOs. 4377-7401.
 - 26. The method of claim 2, wherein the filamentous fungal ESTs are *Trichoderma* ESTs.
- 10 27. The method of claim 26, wherein the filamentous fungal ESTs are *Trichoderma* reesei ESTs.
 - 28. The method of claim 27, wherein the *Trichoderma reesei* ESTs are are selected from the group consisting of SEQ ID NOs. 7402-7860, nucleic acid fragments of SEQ ID
- NOs. 7402-7860, and nucleic acid sequences having at least 90% homology to SEQ ID NOs. 7402-7860.
 - 29. The method of claim 28, wherein the *Trichoderma reesei* ESTs are SEQ ID NOs. 7402-7860.

- 30. The method of claim 28, wherein the *Trichoderma reesei* ESTs are nucleic acid sequences having at least 90% homology to SEQ ID NOs. 7402-7860.
- 31. The method of claim 30, wherein the *Trichoderma reesei* ESTs are nucleic acid sequences having at least 95% homology to SEQ ID NOs. 7402-7860.
 - 32. The method of claim 31, wherein the *Trichoderma reesei* ESTs are nucleic acid sequences having at least 99% homology to SEQ ID NOs. 7402-7860.
- 30 33. The method of claim 32, wherein the *Trichoderma reesei* ESTs are nucleic acid sequences having at least 99.9% homology to SEQ ID NOs. 7402-7860.

34. The method of any of claims 1-33, wherein one or more of filamentous fungal cells are selected from the group consisting of an Acremonium, Aspergillus, Fusarium, Humicola, Mucor, Myceliophthora, Neurospora, Penicillium, Thielavia, Tolypocladium, and Trichoderma cell.

5

- 35. The method of any of claims 1-34, wherein the two or more filamentous fungal cells are the same cell.
- 36. The method of any of claims 1-35, wherein the two or more filamentous fungal cells are *Fusarium venenatum* cells.
 - 37. The method of any of claims 1-35, wherein the two or more filamentous fungal cells are Aspergillus niger cells.
- 15 38. The method of any of claims 1-35, wherein the two or more filamentous fungal cells are Aspergillus oryzae cells.
 - 39. The method of any of claims 1-34, wherein the two or more filamentous fungal cells are different cells.

- 40. The method of any of claims 1-39, wherein the hybridization conditions are selected from the group consisting of very low, low, low-medium, medium-high, high, and very high stringency conditions.
- 41. A computer readable medium having recorded thereon an array of filamentous fungal ESTs for monitoring differential expression of a plurality of genes in a first filamentous fungal cell relative to expression of the same genes in one or more second filamentous fungal cells.
- 30 42. The computer readable medium of claim 41, wherein the filamentous fungal ESTs are selected from the group consisting of Acremonium, Aspergillus, Fusarium, Humicola, Mucor, Myceliophthora, Neurospora, Penicillium, Thielavia, Tolypocladium,

and Trichoderma ESTs.

43. The computer readable medium of claim 42, wherein the filamentous fungal ESTs are *Fusarium* ESTs.

5

- 44. The computer readable medium of claim 43, wherein the filamentous fungal ESTs are Fusarium venenatum ESTs.
- 45. The computer readable medium of claim 44, wherein the *Fusarium venenatum* 10 ESTs are selected from the group consisting of SEQ ID NOs. 1-3770, nucleic acid fragments of SEQ ID NOs. 1-3770, and nucleic acid sequences having at least 90% homology to SEQ ID NOs. 1-3770.
- 46. The computer readable medium of claim 45, wherein the *Fusarium venenatum* 15 ESTs are SEQ ID NOs. 1-3770.
 - 47. The computer readable medium of claim 45, wherein the *Fusarium venenatum* ESTs are nucleic acid sequences having at least 90% homology to SEQ ID NOs. 1-3770.
- 20 48. The computer readable medium of claim 42, wherein the filamentous fungal ESTs are Aspergillus ESTs.
 - 49. The computer readable medium of claim 48, wherein the Aspergillus ESTs are Aspergillus niger ESTs.

25

50. The computer readable medium of claim 49, wherein the *Aspergillus niger* ESTs are selected from the group consisting of SEQ ID NOs. 3771-4376, nucleic acid fragments of SEQ ID NOs. 3771-4376, and nucleic acid sequences having at least 90% homology to SEQ ID NOs. 3771-4376.

30

51. The computer readable medium of claim 50, wherein the *Aspergillus niger* ESTs are SEQ ID NOs. 3771-4376

52. The computer readable medium of claim 50, wherein the *Aspergillus niger* ESTs are nucleic acid sequences having at least 90% homology to SEQ ID NOs. 3771-4376.

- 5 53. The computer readable medium of claim 48, wherein the Aspergillus ESTs are Aspergillus oryzae ESTs.
- 54. The computer readable medium of claim 53, wherein the Aspergillus oryzae ESTs are selected from the group consisting of SEQ ID NOs. 4377-7401, nucleic acid fragments of SEQ ID NOs. 4377-7401, and nucleic acid sequences having at least 90% homology to SEQ ID NOs. 4377-7401.
 - 55. The computer readable medium of claim 54, wherein the Aspergillus niger ESTs are SEQ ID NOs. 4377-7401.
 - 56. The computer readable medium of claim 54, wherein the *Aspergillus oryzae* ESTs are nucleic acid sequences having at least 90% homology to SEQ ID NOs. 4377-7401.
- 57. The computer readable medium of claim 42, wherein the filamentous fungal 20 ESTs are *Trichoderma* ESTs.

- 58. The computer readable medium of claim 57, wherein the filamentous fungal ESTs are *Trichoderma reesei* ESTs.
- 59. The computer readable medium of claim 58, wherein the *Trichoderma reesei* ESTs are are selected from the group consisting of SEQ ID NOs. 7402-7860, nucleic acid fragments of SEQ ID NOs. 7402-7860, and nucleic acid sequences having at least 90% homology to SEQ ID NOs. 7402-7860.
- 30 60. The computer readable medium of claim 59, wherein the *Trichoderma reesei* ESTs are SEQ ID NOs. 7402-7860.

61. The computer readable medium of claim 59, wherein the *Trichoderma reesei* ESTs are nucleic acid sequences having at least 90% homology to SEQ ID NOs. 7402-7860.

- 5 62. The computer readable medium of any of claims 41-61, wherein the medium is selected from the group consisting of a floppy dick, a hard disk, random access memeory (RAM), read only memory (ROM), and CD-ROM.
- 63. A computer-based system for monitoring differential expression of a plurality of genes in a first filamentous fungal cell relative to expression of the same genes in one or more second filamentous fungal cells comprising the following elements:

15

20

25

30

(b).

- (a) a data storage means comprising filamentous fungal ESTs selected from the group consisting of SEQ ID NOs. 1-7860, nucleic acid fragments of SEQ ID NOs. 1-7860, and nucleic acid sequences having at least 90% homology to the sequences of SEQ ID NOs. 1-7860;
- (b) a search means for comparing a target sequence to a filamentous fungal EST sequence of the data storage means of step (a) to identify homologous sequences; and
 - (c) a retrieval means for obtaining the homologous sequence(s) of step
- 64. A substrate comprising an array of filamentous fungal ESTs for monitoring differential expression of a plurality of genes in a first filamentous fungal cell relative to expression of the same genes in one or more second filamentous fungal cells.
- 65. The substrate of claim 64, wherein the filamentous fungal ESTs are selected from the group consisting of *Acremonium*, *Aspergillus*, *Fusarium*, *Humicola*, *Mucor*, *Myceliophthora*, *Neurospora*, *Penicillium*, *Thielavia*, *Tolypocladium*, and *Trichoderma* ESTs.
- 66. The substrate of claim 65, wherein the filamentous fungal ESTs are *Fusarium* ESTs.

67. The substrate of claim 66, wherein the filamentous fungal ESTs are *Fusarium* venenatum ESTs.

- 5 68. The substrate of claim 67, wherein the *Fusarium venenatum* ESTs are selected from the group consisting of SEQ ID NOs. 1-3770, nucleic acid fragments of SEQ ID NOs. 1-3770, and nucleic acid sequences having at least 90% homology to SEQ ID NOs. 1-3770.
- 10 69. The substrate of claim 68, wherein the *Fusarium venenatum* ESTs are SEQ ID NOs. 1-3770.
 - 70. The substrate of claim 68, wherein the *Fusarium venenatum* ESTs are nucleic acid sequences having at least 90% homology to SEQ ID NOs. 1-3770.
 - 71. The substrate of claim 65, wherein the filamentous fungal ESTs are Aspergillus ESTs.

15

- 72. The substrate of claim 71, wherein the Aspergillus ESTs are Aspergillus niger 20 ESTs.
 - 73. The substrate of claim 72, wherein the *Aspergillus niger* ESTs are selected from the group consisting of SEQ ID NOs. 3771-4376, nucleic acid fragments of SEQ ID NOs. 3771-4376, and nucleic acid sequences having at least 90% homology to SEQ ID NOs. 3771-4376.
 - 74. The substrate of claim 73, wherein the *Aspergillus niger* ESTs are SEQ ID NOs. 3771-4376
- 30 75. The substrate of claim 73, wherein the *Aspergillus niger* ESTs are nucleic acid sequences having at least 90% homology to SEQ ID NOs. 3771-4376.

The substrate of claim 71, wherein the Aspergillus ESTs are Aspergillus oryzae 76. ESTs.

- The substrate of claim 76, wherein the Aspergillus oryzae ESTs are selected from 77. the group consisting of SEO ID NOs. 4377-7401, nucleic acid fragments of SEQ ID 5 NOs. 4377-7401, and nucleic acid sequences having at least 90% homology to SEQ ID NOs. 4377-7401.
- The substrate of claim 77, wherein the Aspergillus niger ESTs are SEQ ID NOs. 78. 4377-7401. 10
 - The substrate of claim 77, wherein the Aspergillus oryzae ESTs are nucleic acid 79. sequences having at least 90% homology to SEQ ID NOs. 4377-7401.
- The substrate of claim 65, wherein the filamentous fungal ESTs are Trichoderma 15 80. ESTs.
 - Toble or page 325-The substrate of claim 80, wherein the filamentous fungal ESTs are Trichoderma 81. reesei ESTs.

20

82. The substrate of claim 81, wherein the Trichoderma reesei ESTs are are selected from the group consisting of SEQ ID NOs. 7402-7860, nucleic acid fragments of SEQ ID NOs. 7402-7860, and nucleic acid sequences having at least 90% homology to SEQ ID NOs. 7402-7860.

- 83. The substrate of claim 82, wherein the Trichoderma reesei ESTs are SEO ID NOs. 7402-7860.
- 84. The substrate of claim 82, wherein the Trichoderma reesei ESTs are nucleic acid sequences having at least 90% homology to SEQ ID NOs. 7402-7860. 30
 - 85. An isolated nucleic acid sequence comprising any of SEQ ID NOs. 1-7860.

86. The nucleic acid sequence of claim 85, wherein SEQ ID NOs. 1-3770 are obtained from Fusarium venenatum.

- 5 87. The nucleic acid sequence of claim 85, wherein SEQ ID NOs. 3771-4376 are obtained from Aspergillus niger.
 - 88. The nucleic acid sequence of claim 85, wherein SEQ ID NOs. 4377-7401 are obtained from Aspergillus oryzae.
- 89. The nucleic acid sequence of claim 85, wherein SEQ ID NOs. 7402-7860 are obtained from *Trichoderma reesei*.
